

High Pressure Grout Pumps

For Optimum Production

HP Series high pressure grout pumps combine the latest advances in grouting equipment design and flexibility. With the HP Series, you can customize pump to meet specific needs by installing a simple conversion kit to increase discharge pressure in the field from the standard **1,000** to **1,600** psi or **2,000** psi.

HP Series pumps are offered separately, or with optional mixing tanks. They can accommodate a variety of power sources to deliver higher volumes at greater pressures for optimum production.
