

Aliva® Converto THE SPRAYING DEVICE FOR DRY AND WET CONCRETE SPRAYING

■ Quick and multifunctional

The Aliva Converto is suitable for both application methods, dry and wet spraying. The new water ring can be easily assembled and allows a simple transition from dry to wet sprayed concrete applications. This can be done directly at the application site by one person, without the use of any additional tools.

■ Innovative nozzle technology with new materials

New robust materials in conjunction with high quality and performance standards were combined to make the Aliva Converto essential for the application of a wide range of concrete and mortar spraying.

■ For dense and thin stream

Same system for both spraying processes

BUILDING TRUST

Aliva[®] Converto

QUICK, SIMPLE AND MULTIFUNCTIONAL

The new, innovative nozzle technology from Aliva Equipment for manual concrete and mortar spraying. Thanks to the very simple attachment of the water ring, the Aliva Converto is flexible in use for dry and wet spraying applications. More safety and control is achieved through the newly designed, ergonomic handle which allows professional working results.

MAIN BENEFITS

- Same equipment for dry and wet spraying
- Simple assembling and replacement of the water ring
- Safe application thanks to the new ergonomic handle
- Reduction of dust
- Dirt resistant and robust materials, simple cleaning of the system
- In all common versions and dimensions available

- For dry and wet spraying applications and for concrete refurbishment
- Water ring system for the thin stream process:

yellow: Dry spraying / red: wet spraying

DENSE STREAM PROCESS FOR WET SPRAYING

Converto spraying system

- Current transformer and Converto casing with red water ring
- For fast reactive accelerators and less dust emission

Converto BackInlet

- Current transformer with new Converto nozzle system
- For slow reactive accelerators and less dust emission

THIN STREAM PROCESS FOR DRY AND WET SPRAYING

Converto spraying device / spraying system

- Available as spraying device without conveying hose

Converto BackInlet

- Pre-damping and better mixture of the concrete in the nozzle

Converto ReproFlex

- Refurbishment and structure protection
