## LATTICE GIRDERS

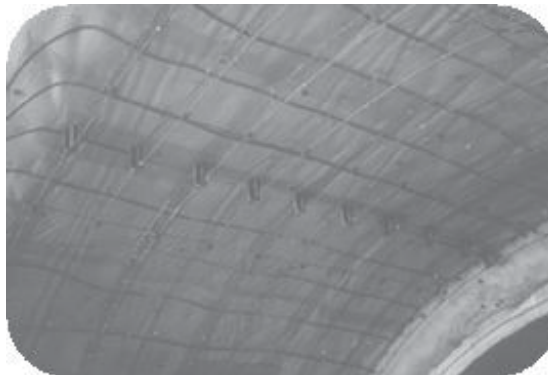

Integrated into the shotcrete shell - **DATA SHEET**

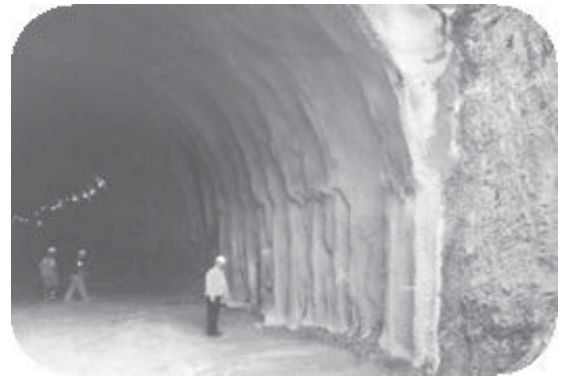

**Preshaped Girders**

**Installation**

**Ready to Shotcrete**

**After Shotcrete Application**

Lattice Girders were developed for the special demands of mining and tunnel construction.

Contrary to rolled sections, regardless of shape, the Lattice Girders are completely integrated into the shotcrete shell.

Porous zones, respectively spray shadows are avoided.

Settling of the surrounding ground is reduced and the water tightness of the shotcrete shell is improved significantly.
