

# MULTICRETE MIGHTY MITE™ MIXER

*We sell solutions™*

The Multicrete Mighty Mite™ Mixer is a lower volume production portable unit that is modular and portable. We have designed our units to be disassembled quickly for repairs and cleaning. This versatile unit is designed to mix and pump neat cement and most commercial pre-blended non-sanded grout mixes.

This unit features one 30-gallon (113 liter) mixing tank and a 2-gallon (7.5 liter) holding hopper through a progressive cavity grout pump. The unique wheel mount permits ease of transport for one person rather than using a forklift. The mixer comes with a bag breaker and variable speed mixing paddles. The manual tank outlet has a large slide gate that allows the thickest materials to discharge easily into the pump hopper.

The grout pump is a variable speed, positive displacement, progressive cavity pump with an output pressure of 176 psi and a volume displacement of 8 gpm.

All components are easily accessible for safe operating, cleaning, and maintenance.
